

Move Your Security Operations on Your Critical Data & Files to the Next Level with Logsign SIEM & SOAR

With SOAR integration, you can monitor your activities within FileOrbis, generate alerts on SIEMs, and then enforce security policies.

Joint Solution

As being in the center of all content flow within an organization, FileOrbis has high visibility on end-user activities while using and sharing content. FileOrbis does not uplift users' digital dexterity by providing a holistic platform but also generates logs for more than 150 unique operations of end-users as well as administrators with many parameters such as username, process, file name, IP, browser/OS details, etc. In fact, Fileorbis monitors all operations that may pose a risk with all details, (file access attempts, listing file structure, attempts to access password-protected areas -secure link-, file shares containing personal data, etc.).

While presenting such valuable information to system administrators on an easily readable interface, **FileOrbis** also shares it with **Logsign SIEM** and **SOAR** which are experts on correlating information coming from different resources and detecting activities conflicting with the organization's security standard. With the help of this integration, activities on FileOrbis can be correlated with other activities within the organization and a security incident can be detected easily. **FileOrbis** and **Logsign SOAR** integration also bring in enforcement capability directly on **FileOrbis**; **Logsign SOAR** automatically informs FileOrbis enforcement to be applied via integration like blocking all an end-user -as a result, content flow including external sharing related with that end-user- who is found to be risky. Using the **FileOrbis** custom API management system, a restricted (IP and function constrained) and secure connection can be established with **Logsign SOAR**.

About Logsign

Logsign develops robust and clutter-free cyber security products and is committed to providing the smartest, easiest-to-use, and most affordable cybersecurity detection and response products and value-added services. Founded in 2010 to enable cyber security practitioners to work more efficiently with smart, clutter-free, and next-generation software products. Securing the IT systems and managing cyber security operations should not be so complex, time-consuming, and over-priced. This is why Logsign developed smart and simple-to-use SIEM and SOAR products considering the market's current and future needs. With 10 years of experience, Logsign is a sincere team player for all internal & external parties, trusted by more than 500 enterprises, ministries, and state agencies.
