

FileOrbis is a next-gen Enterprise Content Management platform that offers secure, efficient, and scalable file and content management. It enhances collaboration by allowing users to easily access, share, and edit files from any channel, ensuring seamless workflow integration. FileOrbis provides robust security features, including encryption, strong authentication, and access control, protecting sensitive data from unauthorized access. Its intuitive interface and advanced search capabilities streamline file organization and retrieval, improving productivity. Additionally, FileOrbis supports compliance with various regulatory requirements, making it an ideal choice for organizations prioritizing data security and efficiency.

Industry Independent
100+ Real Life Use Cases

Enterprise Content Management Challenges Today

Key Benefits of FileOrbis

Enhanced Productivity During Remote Work

Ensures seamless and secure access to user content from any location, overcoming the limitations of traditional file environments and supporting digital transformation priorities.

Minimized Software Development Costs and Time

Offers APIs and SDKs to assist business applications, significantly lowering costs and development time for file transmission and sharing.

Responsible Feeding to AI for Cyber Resilience and Compliance

Allows organizations to confidently leverage AI to enhance their operations, ensuring a secure and efficient digital future.

Elimination of Maintenance Costs for Scattered File Environments

Consolidates independent systems to reduce management overhead and increase efficiency.

Reduced Security and Compliance Risks

Provides full control over files containing critical data, mitigating security and compliance risks.

50+

Technical Partnerships

Empower your Enterprise with FileOrbis

- ▶ **Access files from everywhere**, whether on-premises or in the cloud, and manage authorizations seamlessly.
- ▶ Federate public folders such as **MS OneDrive, MS SharePoint, and Google Drive** without relocating files.
- ▶ Share files with internal and external users with **diverse permissions via HTTP(S), FTP(S), SFTP and API**.
- ▶ **Include files into security analyses and processes with unique integrations** into existing cybersecurity stacks, including Anti-malware, DLP, Sandbox, SIEM, and SOAR.
- ▶ Conduct advanced data governance with content and **sensitive data analysis, classification, and actions** such as blocking or approval requirements based on data classes.

FileOrbis stands out with its **unique operational and control features**, enhancing business process efficiency and file/document transfers. It **integrates effortlessly with existing infrastructure** tools such as sandbox, endpoint protection, DLP, and SIEM products, facilitating compliance with **regulatory requirements through critical data analyses and additional security measures**.

Operations in 10+ Countries, Trusted by 250+ Global Clients
